

Elevator Brakelining

Kapabrake is the sole African manufacturer (OEM) of woven brakelining. This is a high quality, non-asbestos product with brass wire insertion for proper heat dissipation.

Kapabrake woven brakelining has been subjected to rigorous testing and international certification.

KB2 lining has an SAEJ661 rating of G/F. Independent compression testing shows positive performance.

For replacement linings we never slit or join lining. A single piece is always used for maximum safety. Our brakes are correctly bonded. We also use thicker lining to ensure a proper radial grind of the brake material to give the optimum mating surface.

Kapabrake also manufactures brake shoes. Please provide us with your requirements and specifications for us to manufacture new brake shoes with lining.

Given our attention to detail, contractors have greater ease of fitment on site. Our high quality work means better mating surfaces. Better bonding means safer fitment. A brake shoe correctly sized means less time to fit.
